SUMMARY

Senior Software Engineer with 7+ years shipping scalable, high-performance web applications across SaaS, healthcare technology, logistics, live streaming, and enterprise platforms — full-stack across React, Angular, Vue, and Node.js/ASP.NET Core, with production experience spanning DRM-protected video streaming for up to 500,000 concurrent users, real-time systems (SignalR, WebSockets), microfrontend architecture, and USDA-compliance reporting pipelines. Also brings hands-on experience integrating AI/LLM features (a Model Context Protocol server, GPT-4-powered document extraction) into production products when the work called for it.

TECHNICAL SKILLS

Frontend	React, Next.js, Angular (incl. standalone components), Vue/Vuex, RxJS, Redux, Tailwind CSS, SCSS, Kendo UI, Semantic UI
Backend	Node.js, ASP.NET Core Web API, Entity Framework Core, Koa.js, Hono.js, Express.js
Languages	TypeScript, JavaScript, C#, Python, SQL
Data	PostgreSQL, Sequelize, Drizzle ORM, Entity Framework Core, MongoDB
Architecture	Microservices, microfrontends, REST APIs, real-time systems (SignalR, WebSockets), SSO/JWT, distributed systems, SaaS
Cloud / DevOps	AWS, GCP, Cloudflare Workers, Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI/CD, Jenkins
Payments / Streaming	Stripe, Montonio, Mollie, Mux, AWS IVS, Dolby, DRM, TUS/Uppy resumable uploads
AI / LLM (applied)	Model Context Protocol (MCP), OAuth 2.1/PKCE, LangChain.js, RAG, Vercel AI SDK

PROFESSIONAL EXPERIENCE

MenuLogic K12 — Senior Software Engineer

Nov 2025 – Present | United States

- Build and maintain full-stack features using Angular, standalone components, RxJS, and Kendo UI on the frontend with ASP.NET Core Web API and Entity Framework Core on the backend.
- Develop USDA-compliance reporting features with Telerik Reporting, including report data pipelines, EF Core queries, REST data-source endpoints, and parameter-driven report definitions.
- Implement cross-application SSO between a legacy MVC shell and an Angular SPA using JWT token handoff via iframe messaging.
- Fix UX and data-integrity issues across list views, form validation, and menu, recipe, and ingredient management workflows.
- Built the product's Model Context Protocol (MCP) server, exposing recipe, ingredient, and district tools to AI agents via a custom OAuth 2.1 + PKCE flow and tenant-scoped tool authorization mirroring the REST API's own role system.

Truckpedia — Software Engineer

Jan 2024 – Oct 2025 | United States

- Led frontend development using React and Vue across a logistics platform.
- Optimized scalability and user performance and implemented real-time updates across multiple devices.
- Collaborated across teams, led feature implementation, mentored junior engineers, and maintained code quality.
- Integrated AI-driven features including OpenAI/LLM-powered prompt engineering and knowledge-base chat for intelligent, context-aware interactions.

Omnivex Corporation — Software Engineer

May 2022 – Dec 2023 | Canada

- Developed custom UI components for the Ink digital-signage platform using Angular, React, and Vue.
- Built real-time user experiences with SignalR and improved component reusability while reducing code duplication.
- Led bug triage for ASP.NET and Angular frontend issues.

Contrive Solutions — Senior JavaScript Developer

Jan 2020 – Jun 2022 | Pakistan

- Built reusable UI components across seven products and shared Angular microfrontend component libraries for Finlex, a German insurance-consulting client.
- Developed the GoOrder food-delivery application using Vue/Vuex and the Penmi calendar/CRUD features using Angular.
- Built Node.js automation for S4 Salesforce bug reporting.

Webicosoft — JavaScript Developer

May 2019 – Nov 2019 | Pakistan

- Developed full-stack features for the Blunk job-matching platform using React, Redux, Semantic UI, Node.js, and MongoDB.

SELECTED CLIENT PROJECTS

Streamflow / LiveArena

Pay-per-view live streaming platform

Built DRM-protected streaming and an event-based pricing engine for an enterprise PPV platform designed for up to 500,000 concurrent users. Implemented real-time payment celebrations and dynamic watermarking via Pusher, resumable S3 uploads with TUS/Uppy, and seamless player switching during buffering. Stack: Next.js/React, Hono, Cloudflare Workers, PostgreSQL, AWS Lambda/SQS, Stripe, Mux/AWS IVS.

GoStork

AI-powered fertility services marketplace

Built real-time messaging infrastructure and integrated PostgreSQL/Sequelize, HubSpot, Stripe, Google Calendar, Outlook, Twilio, and SendGrid on Docker/Kubernetes/GCP. Also built a GPT-4-powered document extraction pipeline transforming unstructured agency documents into standardized, searchable profiles.

OPEN SOURCE

weaviate/typescript-client

github.com/weaviate/typescript-client

Diagnosed and fixed a silent data-loss bug in Weaviate's official TypeScript client — `data.ingest()` accepted the documented input shape but stored it empty — with regression tests; submitted and accepted upstream.

ALSO ACTIVE IN

Maintains an independent portfolio of RAG and vector-search engineering projects (from-scratch BM25/HNSW implementations, LLM-evaluation harnesses, agentic retrieval pipelines) — [details at osama-ansar.netlify.app](https://osama-ansar.netlify.app).

EDUCATION

BS Software Engineering

University of Gujrat | 2015–2019 | CGPA 3.7/4.0

Artificial Intelligence | Machine Learning | Data Structures & Algorithms | Database Management Systems | Software Engineering

AWARDS

- Best Performance Award — Contrive Solutions
- 1st Place — Speed Programming Competition
- Merit Scholarship Recipient
- UOG Topper — 1st Position
- Selected for Business Incubation Program
